

An upper ridge is giving uptrending conditions across the province where temperatures will be between 30-33C with 20-25% RH values and light variable winds. Widespread cross over conditions are expected. The slopes will continue to see SE 10-15km/h winds with the mountain parks having SW 10-15km/h winds. Temperatures in the eastern Rockies will be in the mid 20's with 20-25% RH values in the northern slopes and 30-35% RH values in the southern slopes. As the upper ridge moves out of the province an upper disturbance in British Columbia will give a slight chance of thundershowers to the western border of BC as well as a chance of upslope thundershowers.

For tomorrow, the upper ridge becomes tilted as it moves into Saskatchewan allowing for the upper disturbance to move into Alberta. This will give a very unstable day for tomorrows burning period where TRW RW is likely. RH values in the northeastern side of the province will continue to remain between 20-25% with temperatures in the low 30's. Elsewhere, the temperatures will be in the upper 20's with 30-40% RH values. The eastern Rockies are expected to have temperatures in the mid 20's with 30-40% RH values. SE 15km/h winds in the eastern boreal with W 15-20km/h winds in the southwest boreal and the slopes.

Forecast for Today and Tonight

Forecast Zone	Maximum Temp	Low RH	Pcpn Covg / Amnt	Pcpn Type	Ltg Prob	Afternoon Wind
