

A cold front will be developing into northern BC this afternoon. Strong and gusty W-SW winds of 25-35 G50-60km/h ahead of this system are forecast across all boreal zones. Along the southern eastern slopes chinook conditions will develop with wind of 40-50 gusting to 70km/h expected in the CR this afternoon/early evening. Above seasonal temperatures are expected in all zones with FFMC values trending higher as humidity values in the 25 to 35% range are forecast.

On Thursday, the cold front will move southeastward through the province with winds shifting from the west to northwest behind the front. Temperatures are expected to drop up to 10 degrees with winds gusts to 40-50km/h forecast through the day. No significant precipitation is expected with this system. However, a secondary cold front moving down south into the northeast boreal zones may bring in some showers or flurries or the mix precipitation late in the afternoon.

Outlook for Friday: Upper ridge will rebuild over the province in the wake of the cold front. Warming will be expected again with moderate to strong and gusty W-SW winds late in the day returning to the eastern slopes under moderate humidity values. Stable conditions will persist over all zones.

Outlook for Saturday: More seasonal conditions are forecast in the province with mainly moderate to strong W-SW winds. Mostly moderate to high humidities are expected in all zones.

Forecast of Temp, RH, and wind for tomorrow afternoon; precipitation for next 24 hours
